

**PERTH AND KINROSS COUNCIL****Environment Committee****21 January 2015****The Flood Risk Management (Scotland) Act 2009  
Assessment of Water Bodies****Report by the Executive Director (Environment)**

The Council's duties with regard to the assessment of relevant bodies of water, and any flood risk they may present, are set out within the Flood Risk Management (Scotland) Act 2009. This report provides an update on the current arrangements for making these assessments and details the proposed assessment frequencies for the Committee's approval.

**1. BACKGROUND / MAIN ISSUES**

- 1.1 The Flood Risk Management (Scotland) Act 2009 (the 2009 Act) has introduced a more modern, coordinated and sustainable approach to flood risk management at both national and local levels.
- 1.2 Although public authorities are expected to take a proactive role in managing and, where achievable, lowering flood risk, the primary responsibility for avoiding or managing flood risk still remains with land and property owners. The 2009 Act does not alter this. Individuals, businesses and communities must therefore play a critical role in making themselves more resilient and in helping to reduce the impact of flooding.
- 1.3 The Council has duties under the 2009 Act to prepare maps of water bodies, assess flood risk on those water bodies and prepare a schedule of clearance and repair works. The Council also has a duty to carry out any clearance and repair works included on this schedule.
- 1.4 This report provides an update on the current arrangements for making these assessments.
- 1.5 Flood risk is defined by the 2009 Act as the combination of the probability of a flood and the potential adverse consequences associated with a flood for human health, the environment, cultural heritage and economic activity. In terms of the assessment of water bodies, this essentially means that while flooding may occur, there also has to be a risk of adverse consequences to receptors (typically people, homes or property).

## Maps of Bodies of Water

- 1.6 Section 17 of the 2009 Act requires the Council to prepare a map of relevant bodies of water and sustainable urban drainage systems (SUDs) in its area. The Council must also review and update the map from time to time and make it available for public inspection.
- 1.7 Relevant bodies of water include bodies of surface water other than a stretch of coastal water, or a body of underground water forming part of a watercourse, and also includes piped and culverted systems and SUDs. It excludes sewers and drains which connect to sewers.
- 1.8 The existing list of main watercourses within Perth and Kinross is shown in Appendix A.
- 1.9 A national project is also being carried out by the Ordnance Survey to develop a Scottish detailed river network (SDRN). Once the SDRN is developed to a sufficient standard, it is hoped that it will be adopted for the Council's map of water bodies. In the meantime, a digitised map of watercourses has been prepared based on existing mapping and is being used for this purpose as part of the Council's Flood Management System (FMS).

## Assessment of Bodies of Water

- 1.10 Under Section 18 of the 2009 Act, the Council has a duty to assess the relevant bodies of water (other than canals) in its area from time to time. The term from "from time to time" is not defined within the 2009 Act. The purpose of the assessment is to ascertain whether the condition of a body of water gives rise to a risk of flooding of land. Where a body of water gives rise to such a risk, and the Council considers that clearance and repair works would **substantially** reduce that risk, the Council must prepare a schedule of those clearance and repair works.
- 1.11 The majority of inspections are usually undertaken between June and September. In general, an assessment involves a site visit and walk along the bank/s of watercourse to carry out a field inspection. The inspection will assess if the watercourse is in a condition that may give rise to flooding. It will mainly be concerned with finding any existing or potential obstructions to flow, such as man made or natural debris, a build up of fallen trees or vegetation, or an accumulation of mud, silt, sediment or other river bed material.
- 1.12 Recent assessments use the existing watercourse list as a basis, with further bodies of water included where it has been identified that they may give rise to a risk of flooding. Assessments are not carried out in areas where flooding occurs but there are no adverse consequences, e.g. in remote mountain areas.

- 1.13 Some bodies of water within the Perth and Kinross area currently require frequent inspections, while those that present less of a risk of flooding are less frequently inspected. The watercourses are inspected at various frequencies, i.e. either every three months, six months, annually or every two years. The frequency of inspection varies depending on the likelihood and risk of flooding from that source. The current inspection frequencies are based on findings from previous assessments as well as information from the public, along with flooding incidents that have occurred within the Council's area.
- 1.14 Details of the watercourse inspections undertaken and any resulting maintenance works have been reported to Committee every two years, under the previous legislation. These reporting arrangements have remained in place during the transition to the 2009 Act, with the most recent report to Committee on 20 November 2013 (Report No.13/544 refers)

#### Clearance and Repair Works

- 1.15 As noted at 1.2, the primary responsibility for avoiding or managing flood risk still remains with land and property owners. In the first instance, clearance and repair works are referred to the landowner, where they can be identified. The Council usually only carries out works where there has been a failure of the landowner to act, where landownership is not clear, or where urgent intervention is required.
- 1.16 The 2009 Act defines clearance and repair works as any or all of the following:-
- (a) Removing obstructions from a body of water;
  - (b) Removing things that are at significant risk of becoming such obstructions;
  - (c) Repairing artificial structures which form part of the bed or banks of a body of water.
- 1.17 Section 59 of the 2009 Act requires the Council to carry out works described on the schedule of clearance and repair works, if the Council considers that these works will either contribute to the implementation of the relevant local flood risk management plan, or will not affect that plan. The current schedule of clearance and repair works is published on the Council's web site.
- 1.18 Once the local flood risk management plans are published in June 2016, in practice this may allow the Council to cease clearance and repair works in an area and to allow it to flood, as this may reduce the risk of flooding to homes or property further upstream or downstream.
- 1.19 It should be borne in mind that the benefit of clearance and repair works may be limited in terms of flood risk management. Generally speaking, experience has shown that clearing small watercourses and culverts in urban areas can be of benefit while removing minor obstructions from larger watercourses makes little difference. Other measures are likely to be required, such as engineered flood defences, to manage the risk of larger floods.

## **2. PROPOSALS**

- 2.1 An exercise had been carried out to review the existing watercourse inspection frequencies and some operational amendments have been made based on the level of flood risk, the benefits of the inspections and the available staff resources to carry out the inspections. The current inspection frequencies were included in the previous report to Committee on 20 November 2013 (Report No.13/544 refers).
- 2.2 An internal flood mitigation audit was carried out in August 2014 as part of the audit plan for 2014/15. The final audit report was submitted to the Audit Committee on 17 September 2014 (Report No. 14/393 refers).
- 2.3 The audit found the Service has processes in place which deliver satisfactory compliance with statutory requirements for assessment, clearance and repair of bodies of water. A lack of detailed national guidance and recognised standards of best practice was noted but Service processes were found to be logical, systematic and adapted to the needs of Perth and Kinross. The audit, however, recommended that a report detailing the updated inspection frequencies should be presented to the Environment Committee in January 2015.
- 2.4 The watercourse inspection frequencies have since been reviewed again by the Council's flooding team. This has included a comparison of current and past inspection frequencies. More frequent inspections will continue to be carried out for those bodies of water and areas which present a higher risk of flooding. Less frequent inspections are proposed for bodies of water and areas that are considered to present a relatively lower risk of flooding. The proposed inspection frequencies are shown in Appendix B.
- 2.5 The inspection frequencies have been standardised so that all inspections are carried out at intervals of either three months, six months, one year or two years. They have also been rationalised so that the watercourses within a localised area are inspected at the same frequency. As a result of these changes, there has been no change to the majority of the inspections; of those that remain the inspection frequencies have mostly increased with a decrease in a small number.
- 2.6 Due to the availability of staff resources, it should be noted that the inspections will not be carried out precisely at the intervals shown in Appendix B but rather within the period noted. For example, a six monthly inspection will involve two inspections per year, each inspection falling somewhere within successive six month periods.
- 2.7 Work has continued on the development of an inspection system similar to that used for road inspections. This Flood Management System (FMS) is operational and was used in the summer of 2014 to record watercourse inspections. However, more work is required to develop this system to further improve the management of inspection routes, assessment frequencies and the ordering of clearance and repair works.

- 2.8 In the meantime, FMS will continue to be developed with these functions being carried out manually as required.

### 3. CONCLUSION AND RECOMMENDATION

- 3.1 This report provides an update on the current arrangements for making watercourse assessments and details the proposed assessment frequencies, for the Committee's approval.
- 3.2 The Committee is asked to approve the proposed watercourse inspection frequencies (Appendix B).

### 1. Strategic Implications

#### Community Plan / Single Outcome Agreement

- 1.1 The proposals relate to the delivery of the Perth and Kinross Community Plan/Single Outcome Agreement by managing flood risk to our residential and business communities in a sustainable manner.

#### Corporate Plan

- 1.2 The Council's Corporate Plan 2013-2018 lays out five outcome focussed strategic objectives which provide clear strategic direction, inform decisions at a corporate and service level and shape resources allocation. They are as follows:
- (i) Giving every child the best start in life;
  - (ii) Developing educated, responsible and informed citizens;
  - (iii) Promoting a prosperous, inclusive and sustainable economy;
  - (iv) Supporting people to lead independent, healthy and active lives; and
  - (v) Creating a safe and sustainable place for future generations.
- 1.3 This report contributes to objectives (iii), (iv) and (v).

## **2. Resource Implications**

### Financial

- 2.1 There are no capital or revenue implications arising directly from the proposals in this report.

### Workforce

- 2.2 There are no workforce implications arising directly from the proposals in this report.

### Asset Management (land, property, IT)

- 2.3 There are no asset management implications arising from the proposals in this report.

## **3. Assessments**

### Equality Impact Assessment

- 3.1 Under the Equality Act 2010, the Council is required to eliminate discrimination, advance equality of opportunity, and foster good relations between equality groups. Carrying out Equality Impact Assessments for plans and policies allows the Council to demonstrate that it is meeting these duties. The Equality Impact Assessment undertaken in relation to this report can be viewed clicking [here](#).
- 3.2 The proposal presented in this report has been considered under the Corporate Equalities Impact Assessment process (EqIA) with the following outcome.
- 3.3 Following an assessment using the Integrated Appraisal Toolkit, it has been determined that the proposal is **not relevant** for the purposes of EqIA.

### Strategic Environmental Assessment

- 3.4 The Environmental Assessment (Scotland) Act 2005 places a duty on the Council to identify and assess the environmental consequences of its proposals.
- 3.5 Following a pre-screening assessment using the Integrated Appraisal Toolkit, it has been determined that the proposal will have no or minimal environmental effects.

### Sustainability

- 3.6 Under the provisions of the Local Government in Scotland Act 2003 the Council has to discharge its duties in a way which contributes to the achievement of sustainable development. Under the Climate Change (Scotland) Act 2009 the Council also has a duty relating to climate change and, in exercising its functions must act:
- in the way best calculated to deliver the Act's emissions reduction targets;
  - in the way best calculated to deliver any statutory adaptation programmes; and
  - in a way that it considers most sustainable.
- 3.7 Following an assessment using the Integrated Appraisal Toolkit, it has been determined that the proposal highlights no significant implications for sustainability.

### Legal and Governance

- 3.8 The Head of Legal Services and the Head of Democratic Services have been consulted on this report.
- 3.9 The legal basis for the proposals set out in this report is the Flood Risk Management (Scotland) Act 2009.

### Risk

- 3.10 The risks associated with any individual proposals to address flooding are identified and managed through individual projects.

## **4. Consultation**

### Internal

- 4.1 The Head of Legal Services, the Head of Democratic Services and the Head of Finance have been consulted in the preparation of this report.

### External

- 4.2 Consultation will be carried out with relevant stakeholders on any individual proposals.

## **5. Communication**

- 5.1 Communication with relevant external stakeholders will take place on any individual measures proposed to manage flood risk in the future.

## **2. BACKGROUND PAPERS**

The following background papers, as defined by Section 50D of the Local Government (Scotland) Act 1973 (and not containing confidential or exempt information) were relied on to a material extent in preparing the above report;

- (1) PKC – Environment Committee – 4 November 2009, Biennial Report on Flood Preventino responsibilities 2009 (Report No 09/504)
- (2) PKC – Environment Committee – 27 January 2010, Flood Risk Management (Scotland) Act 2009 (Report No. 10/51)
- (3) PKC – Environment Committee – 21 March 2012, Biennial Report on Flood Prevention (Report No 12/135)
- (4) PKC – Environment Committee – 20 November 2013, Progress Report, Flood Risk Management (Scotland) Act 2009 (Report No 13/544)
- (5) PKC - Audit Committee – 17 September 2014, 14-02 Flood Mitigation (Report 14/393)

## **3. APPENDICES**

Appendix A – Main Watercourses in Perth and Kinross

Appendix B – Proposed Watercourse Inspection Frequencies

## Appendix A
